We will kick off the New Year with the annual Clark County Winter Educator Training where you will learn about new Certification opportunities launching in 2022!

Participating educators will leave this training prepared to complete a Certification project and will have made connections with local community members who support their efforts. Be one of the very first to hear about EarthGen's new Certification category!

A total of up to **5 free STEM clock hours** will be provided courtesy of EarthGen. These hours will be given for 2 hours during the live training and 3 hours of optional project implementation work.
